

Proudest Achievement:

I took part in an insurance project from 04/2017 ~ 08/2019. I learned a lot from the project.

1. Played several roles:
business analyst, architect, team leader, developer, tester, deployer.
2. Experienced a full life cycle of the project:
Design -> Development -> Test -> Deployment
Waterfall for all project phases. Agile for the development and test phases.
3. Used several technologies related to the distributed system.
Angular 2+, Java 8+, Springboot, docker, K8S, Jenkins, git, maven, AWS, Linux shell.

I am proud of the project because the project is successful and we got a high reputation from the client, especially my team's performance, meanwhile, I had a precious chance to use my knowledge to implement a cloud distributed system.

The details for the project:
